1.AQUA PEEL

Use vacuum to open pores for a deep cleanse and easy extraction of impurities and dead skin cells. It also allows the active ingredients in our boosters to penetrate deeper, for the most effective treatment possible.

2.OXYGEN JET

High-pressure oxygen injection, small particles and strong penetration Penetrates deep into the basal layer, enhances water retention, and absorbs more easily by narrowing pores

3.EMS FACE

Nanocrystals promote the absorption of skin care products by opening channels for skin absorption Therefore, when nanocrystals are used, skin care products can be more absorbed by the skin

4.COLD-HEAT

Quickly lower the temperature below 0 degrees for skin quality, and achieve the effect of removing redness, anti-sensitivity, firming and shaping

5.MICRO LIFT

Anion and cation EMS microcurrent alternates between positive and negative, so that cations are imported and anions are exported
improve facial contours

6.OXYGEN

Create an oxygen supply environment, activate cells, and enhance absorption Inject the product into the deep layer of the skin and cooperate with fruit acid skin peeling products

7.ULTRASOUND

Ultrasound—1 to 3 million vibrations per minute, opens the pores, allowing the essence to quickly penetrate into the base layer of the skin, allowing the absorption rate to reach more than 90%

8.RF

The probe can emit radio waves that vibrate 6 million times per second. The high-frequency vibrations are the molecules in the skin that generate heat due to friction, so as to achieve the effect of firming the skin and improving wrinkles

9.CLEANSING SHOVEL

Use high-frequency vibration waves to soften the stratum corneum and deeply clean the skin dirt

10.ANALYZER

HOW EMS FACE WORKS ?

Nanocrystals use nano-scale contacts, which are as thin as more than 250 nanometers and as short as 0.1 mm, which can just open the stratum corneum of the skin without touching the dermis. It not only solves the problem of skin absorption, but also achieves painless and non-invasive treatment!

Natural application and absorption

In the case of natural application and absorption of skin care products, the molecules of skin care products only penetrate into the epidermis. It is difficult to penetrate into the deeper skin layer, and the absorption rate is very low.

Nanocrystalline nanochip (The product can penetrate evenly into the dermis.)

Nanochips only penetrates the barrier layer of the epidermis without touching blood vessels and nerves. It is painless and non-invasive, and the absorption capacity is greatly improved.

EMS function

The microelectronic heat conduction technology opens the pores, which can increase the product absorption rate by more than 40%.

Principle of nanochip introduction

- ⊙ Nanocrystals are made of monocrystalline silicon. In addition to being tough, monocrystalline silicon can also be thin enough and short enough to only break through the barrier layer of epidermal absorption, and it's far from touching blood vessels and nerves, so you can't feel pain, nor will it bleed.
- ⊙ Nanocrystals promote the absorption of skin care products by opening the skin absorption channel, so skin care products can be more absorbed by the skin when nano crystals are introduced.
